

Clinical CKD Stage Report

Report Date: 07-05-2026

Determined Clinical Stage: Stage 3a

(Mild to moderate loss of kidney function (eGFR 45-59).)

Key Goals:

- Prevent and treat complications
- Prepare for more intensive management

Dietary Focus:

- Consult a renal dietitian
- Limit sodium (< 2,000 mg/day)
- May need to limit phosphorus and protein based on lab results

Lifestyle Recommendations:

- Moderate, consistent exercise is key
- Close self-monitoring of blood pressure and blood sugar (if diabetic)

Key Complications to Monitor:

- Anemia (low red blood cell count)
- Early bone disease
- Hypertension becomes more common and harder to control

Disclaimer:

This report is for informational purposes only. The clinical stage is determined by the eGFR value as per standard medical guidelines. It is not a substitute for professional medical advice. Always consult a qualified nephrologist for diagnosis, treatment, and management plans.
